

Disinfection, Washing, Drying, Mixing, Conveying, Weighing

Processing line for lettuce and leafy vegetables

A networked, fully automated system for weighing, sorting, washing and drying salad leaves – e.g. baby leaf or mixed lettuce – and leafy vegetables: For maximum hygiene and efficiency, gentle processing and high product quality.

up to 2,000 kg (4,400 lb)/h Max. capacity

Your benefits

- ✓ Fully automated – for maximum efficiency in production, high capacities and a low personnel requirement
- ✓ SMART: continuous processing due to communication between the machines and visual displays for the operators.
- ✓ Integrated high-quality, innovative washing and drying technology, including the GEWA AF, GEWA XL, K850
- ✓ Sets new standards in hygiene for food production with maximum safety
- ✓ Dynamic weighing and dispensing as well as mechanical and optical sorting with integrated solutions from iWEIGH and HiTec Food Systems
- ✓ Designed for gentle processing and high product quality – especially for light, sensitive products

Innovative and networked – intelligent and efficient weighing, washing, drying and sorting

The fully automated, networked processing line integrates innovative washing and drying technology from KRONEN with a dynamic weighing system from **iWEIGH** and mechanical and optical sorting solutions from HiTec Food Systems. All components of the line are networked. This ensures constant, low-interruption processing and low personnel requirements. At the same time, a cost-

efficient process, high capacities and maximum quality in production are guaranteed. The innovative system sets new standards in terms of hygiene.

The following machines or solutions are integrated:

- **Weighing in and conveying:** Flow Weigh Belt System, a dynamic recipe weighing belt by iWEIGH
- **Sorting:** Mechanical sorting system by HiTec Food Systems and visual sorting system by Optimum
- **Conveying and weighing:** **PLUS inclined conveyor belt** and a weighing belt by iWEIGH, which communicates with the recipe weighing belt for an optimized product flow
- **Pre-washing:** **GEWA AF "Active Flume" washing system with belt outfeed**, including a water chute for gentle product intake, insect and fine particle removal with an extended contact surface and an air section with an integrated sand trap.
- **Washing:** **GEWA XL HELICAL washing machine with belt outfeed**, including a water chute for a gentle product intake, sand trap sedimentation unit and lateral fine particle removal drum
- **Drying:** **K850 drying system** including water drainage with a flexible drip guard on the belts as well as advance dewatering
- **Further transport and weighing:** Standard trolley weighing system by iWEIGH for continuous filling of standard containers up to 300 l

Application options and capacities:

The system is optimized for processing light, delicate, leafy products such as baby leaf lettuce as

well as mixed salads, which are weighed in fully automatically. Leafy vegetables such as spinach, chard, radicchio, Chinese cabbage or kale can also be processed.

The capacity depends on the product. The line processes, for example:

- Up to 1,000 kg/hour of baby leaf lettuce
- Up to 2,000 kg/h of mixed salad (e.g. sweet leaf with 30 % carrot and cabbage)

For the processing of non-floating products, **another GEWA washing machine** can be integrated instead of the GEWA AF.
