

DZ12

THE CARBIDE BLADE OF CHOICE

PROCESSING
TIPS
FROM URSCHEL®

Urschel DZ12 carbide blades 67284 and 93401 have been shown to last significantly longer in the majority of Comitrol® Processor size reduction applications - test after test. These blades are engineered out of DZ12 material, which is highly durable and corrosion resistant.

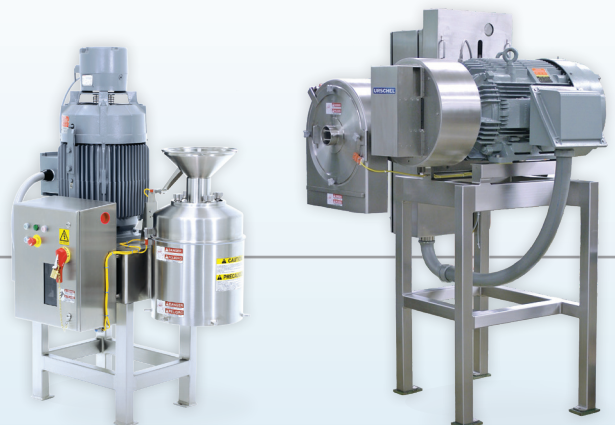

Due to the highly effective characteristics and successful applications, the cost of these blades has been reduced, and will now be the default blade when ordering Microcut head assemblies.
