

# Increased Capabilities for the Model GK-A

A simple changeover of cutting parts on your Model GK-A allows you to produce julienne strips thus extending the capabilities of your existing machine. Julienne thicknesses of 1/8, 5/32, 3/16, 1/4, and 5/16" (3.2, 4.0, 4.8, 6.4, and 7.9 mm) are possible.

*For best results, check with your local Urschel representative for the most effective set-up for your particular application.*

In most cases, the dicing set-up (Figure 1) is replaced by a julienne set-up (Figure 2). In the julienne set-up, the crosscut knife spindle is replaced with the slice guide feed roll assembly to properly direct slices to the circular knives. The standard slicing knife is replaced with a knife designed for slicing only, and the standard slice guides are replaced with slice guides especially designed for julienne strips.
