

# MEET THE E TranSlicer® Cutter with Built-in Conveyor Discharge

CUTTING  
SOLUTIONS

New Development  
in the TranSlicer® Line.

Urschel introduces the latest E TranSlicer® (ETRS) Cutter. The newly designed E TranSlicer Cutter includes a built-in discharge conveyor. The discharge conveyor facilitates dispensing cut product into totes. The built-in conveyor assists in effectively capturing slivered, small cuts of leeks, onions, or peppers to promote complete discharge from the machine. The design streamlines processing with minimal elevation changes plus controlled and contained transfer points to ensure maximum product is processed.

The belt-fed E TranSlicer Cutter is ideally suited for elongated food products. It employs different styles of 20" (508 mm) diameter cutting wheels to create flat or crinkle slices and julienne cuts.
