

## NEW DEVELOPMENT IN POTATO SLICING

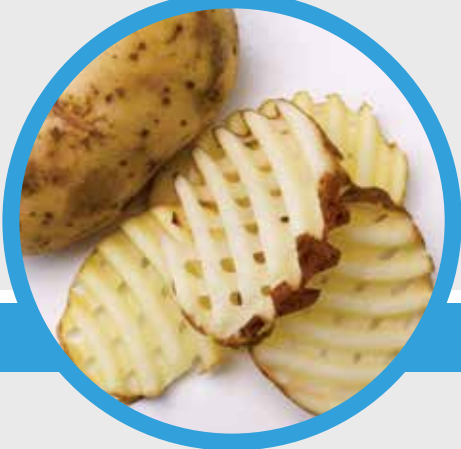

# How to Level Up Your Corrugated Cuts

CUTTING  
SOLUTIONS

A new machine joins the legendary Urschel Model CC (Potato Chip Cutter) Series. If you are looking for a standout slicer to add to your lineup, **meet Urschel's CCLL (Chip Cutter Large Lattice) Slicer.**

New CCLL Slicer

### What you will notice about the machine:

- Stainless steel design includes a 10 HP (7.5 kW) motor to keep capacities at their highest. The CCLL delivers more than twice the capacity of the CCL (dependent on feeding method).
- The larger 32" (813 mm) cutting chamber where all of the cutting action happens.
- Knives can be easily replaced without removing the head from the machine.
- The <sup>†</sup>patented impeller offers a larger central feed opening, 5 cutting stations with longer tubes, plus hybrid, extended-life ceramic bearings.
- Built-in lower slicing angle leads to less fracturing, increased slice quality, and more complete slices for increased productivity and yield.

### Types of Cuts

Coarse to Deep Lattice
