CUTTING SOLUTIONS

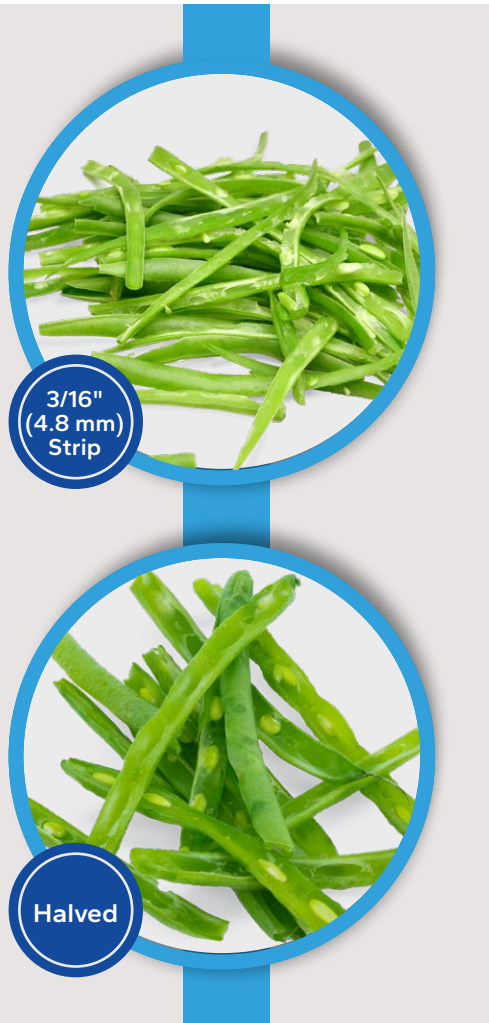

The DiversaCut 2110A® Dicer (MDCA) by Urschel is available to mate directly to a shaker feeder for the production of French style green beans.

Set-up for Slicing

The DiversaCut 2110A® Dicer (MDCA) by Urschel is available to mate directly to a shaker feeder for the production of French style green beans.

The MDCA is securely interlocked and mated with the shaker feeder. Product enters the heart of the cutting zone via the lanes of the shaker feeder. The lanes of the shaker feeder align with the divided channel impeller for proper orientation of the product as it is sliced lengthwise. The set-up features an ideal discharge chute inline with the trajectory to gently cut product at high volume capacity.

Contact Urschel for more information.
